What stood out to me most about open source is how it is about having more freedom and control over your computer. In William Shotts's introduction to The Linux Command Line, he talks about personal empowerment and creative freedom, and how people were fighting to keep control of their computers by creating their own software and building Linux. This connects to the "Open Source Explained" video, which explained the GPL (General Public License) that gives users four freedoms, to run, study, share, and modify software. Having these freedoms also allows people to work together, which is shown through GitHub, where developers can share code, report bugs, suggest changes, and contribute to projects. In the video "The Rise of Open-Source Software" it showed how this type of collaboration helped Linux grow from a small project into technology used by many large companies today. I also liked seeing in the "Switch to these open source apps if you're stuck on Windows or Mac OS!" video that open source is not only about Linux because people using Windows or Mac can use programs like GIMP for an alternative to photoshop and LibreOffice for an alternative for openoffice . Overall, the different sources helped me understand that open source gives people more control over their technology while also giving them the opportunity to work together and improve it.

Acknowledgements

- By submitting this assignment I [Abbigail Powell] acknowledge that I have read the syllabus or home page of the course
- I also acknowledge that I have written down any questions that I have for the professor and will ask them in class or via Slack
- I also acknowledge that I am aware that the final exam is In Person
